

THE ANDERSONS, INC | TECHNICAL BULLETIN 05

LOW-SALT FOLIAR PROGRAM | CORN

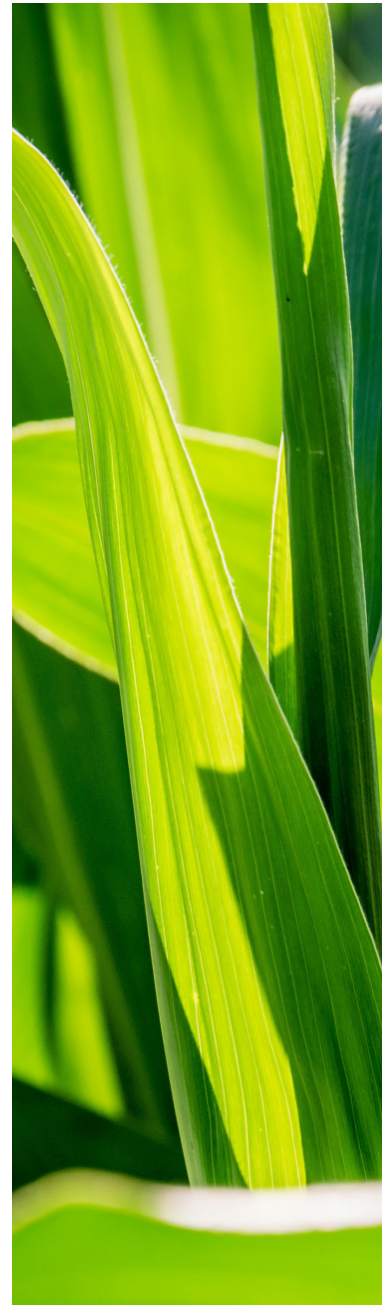

Give corn an extra “fertility kick” with PureGrade® liquid fertilizer. Nutrients enter the leaf and travel rapidly throughout the plant causing the root system to increase nutrient and water uptake. The results are higher quality crops and more bushels per acre.

PureGrade base grade products Diamond and GoldStart® may also be used as a foliar application. The corn foliar program shown below includes 1 to 3 gallons of Diamond 9-18-9 mixed with a minimum of 5 gallons of water per acre, plus humic acid, chelated calcium and chelated zinc.

FOLIAR APPLICATION OF DIAMOND 9-18-9 Corn | Iowa | 2016

Foliar applications made 10 days before tassel in all three plots.

GOLDSTART® AND DIAMOND FOLIAR PRODUCTS:

GOLDSTART: 6-24-6, 9-18-9, 3-18-18, and 6-22-2

DIAMOND: 9-18-9, 3-18-18, 6-24-6, and 5-15-15
